

Continua Joins AAMI to Focus on Wireless Issues

Continua has signed on as a supporter of AAMI's fall edition of *Horizons* magazine, which will focus on the challenges and opportunities of wireless and network management in the healthcare environment.

The award-winning magazine—which will be published in September—will provide in-depth, practical articles and research on the issues that manufacturers and hospitals face in managing medical devices on the IT network—in a world that's going increasingly wireless.

The *Horizons* publication will be distributed to 10,000 medical technology professionals, including to [all AAMI members](#) and attendees at several biomedical association meetings and industry events this fall. The publication will also be available at [AAMI's Annual Conference & Expo](#) in Charlotte, NC, June 2-4, 2012.

Continua is one of six national healthcare organizations that signed on as a supporting organization to *Horizons*. The others are:

- The Healthcare Information Management and Systems Society (HIMSS)
- The College of Healthcare Information Management Executives (CHIME)
- The American College of Clinical Engineering (ACCE)
- The Wi-Fi Alliance
- mHealth Summit

As supporters, these organizations will promote the publication to their members and customers to help expand the visibility of the articles and issues.

“This broad-based collaboration with six significant organizations underscores our decision to tackle a tough challenge in healthcare,” said AAMI President Mary Logan.

The publication will cover topics such as a:

- Step-by-step risk management of networks
- Preparing biomedes for the future
- The U.S. Food and Drug Administration's medical device data system rule
- Implementation stories from the field
